New M. J. Maillis UK models and machine leasing service generate ‘significant interest’ at 2005 PPMA Show

The recent PPMA Show, at Birmingham’s National Exhibition Centre, proved to be a resounding success for complete end-of-line packaging solutions specialists, M. J. Maillis UK. As well as using the occasion to present a wide range of highly innovative strapping, stretch wrapping, shrink systems, carton closure technologies and hand tools, the Nottingham-based company also launched a brand new machine leasing service.

“M. J. Maillis UK has always viewed the PPMA Show as one of the most important events in our annual exhibition diary,” commented M. J. Maillis UK’s Sales and Marketing Manager, Jacqueline Roe. “Each year we go to considerable lengths to provide delegates with the widest choice of leading-edge packaging solutions. However, for 2005, we were delighted to also be able to announce a brand new machine leasing facility that has been designed to make our wrapping, strapping and sealing technologies even more accessible and provides the opportunity to lease standard packaging machinery models from as little as £60.59pcm.”

New high performance stretch wrapper

In addition to the new leasing facility, visitors to the M. J. Maillis UK stand were also able to find out more about M. J. Maillis Group's new Mancon 1710 high performance stretch wrapper. Following in the footsteps of the much acclaimed Mancon 2201 model, the newly launched Mancon 1710 is one of the fastest wrapping solutions currently on the market.

An evolution of the outstanding technologies already to be found on the Mancon 2201, it incorporates a larger carbon composite ring for a more positive drive, lower maintenance, an advanced film carriage and film cut clamp device, enhanced top sheet assembly, a demountable frame for easier installation and a smaller footprint – a major benefit for packaging lines with limited floor space.

Greater speed and efficiency in semi-automatic wrapping

The other new machine that proved to be of specific interest to delegates was the M. J. Maillis Group PR303 semi-automatic stretch wrapper. Capable of achieving film stretch levels of up to 300% and throughput capabilities of up to 50 pallets per hour, this latest Maillis model combines the benefits of speed and efficiency. With an industry-leading warranty and minimal maintenance, the PR303 is all set to redefine the semi-auto market.
